WHO WE ARE

The firm V.M.L. operates in the sector of the superficial finishes and the anticorrosive protections from decades and, since the end of the years 70, has begun to industrially apply the powder painting products, specializing more and more in special finishes and in specialized pre-treatment.

Our principal objective is the constant attention to generally evolve of the world of the pretreatment and of the superficial finish, to be able to propose to the client a complete consulting service: individualization of the fittest pretreatment to be effected, colors study, use of the painting product with the best performing characteristics, execution of the most proper cycle, industrialization, tests of laboratory, execution of workmanships accessorie (tampografy, assemblages, preassembly, specific packings.) Our qualitatively furnish suitable services to the Clients is testified by the updating of our system quality to the mark of quality ISO 9001. VISION, edition 2008.

Currently we have operating:

- ✚ **two manual departments**, liquid-paint and powder-paint, equipped of booths of last generation and special islands of job for: grouting, tampografy, application of protections and masking, application of stickers.
- ✚ **two automatic departments**, complete of pressurize automatic booths, tunnel of specific pretreatment (nanoceramic bonderizing for the iron department and passivation chromium 6 free for the aluminum department), ovens of drying and polymerization, with filtrated floors, ultrafiltration to 90 µm of the painting products, continuous mixing of the recovery powder, with inertial separator and with peristaltic pumps and application with triboelectric or supercorona guns, according to the specific demands, with possibility to get on all the materials essays resistances to the corrosion of over 1.000 hours of permanence in room of salt spray fog.
- ✚ **a complete laboratory of control and testing**, equipped for the control of the characteristics and the performanceses of the applied film, with kit of grid test, adhesion test, glossmeter, spettrophotometer, sclerometer, booth of salt spray fog, thermostatic heater, termostated demineralized water's tub.
- ✚ **a department of treatment of the waters**, complete of water softener, a three columns demineralizer and a revolutionary vacuum evaporator. So we are able to treat, in total, over a million and a half of water liters per month, water that we reuse on our fittings, with qualitative advantages (the water that we postpone to the fittings is to 5 - 10 µS) and ecological (our firm is defined "zero water discharge")

WHERE WE ARE

Recently we move to the new seat of Brivio (LC), in an area of over 4.500 mqs, in an area covered of over 2.200 mqs, we have a store covered with 600 mqs. Our productive center easily results attainable from the principal industrial installations of the Lombardy. We have besides proper means for the withdrawal and the delivery of the commodity to work.

VML – Verniciatura Metalli Lecco s.r.l.

WHAT WE DO

The VML is proposed to different markets of the motorcycle sector, auto, appliance, iron-tram, urban furnishings, hardware, etc. choosing to transfer to his/her clients the value of the quality of his/her own finishing touch. Such level is reached with fittings to elevated contained technological and with the aid of extremely competent human resources.

We daily perform specialistic and particular finishes, on purpose you study in collaboration with our Clients, what: bonderized, arabesque, sparkling, pigmented transparent, sable effects, anodized effects, wrinkling, glazed, pearled, iridescent, fluorescent, colors deep opaque effect, etc. At the side some photos that represent parts worked by us.

INDUSTRIAL SOLUTIONS

The list of the finishes with industrial solutions that we are able to offer to our clients is long and of sure validity:

- ✚ **PRIMER:** solution for parts that they are not able to be phosphated
- ✚ **ANTIGRAFFITI:** special varnish for the protection of urban furnishes
- ✚ **METALLIC BI-COLOR:** new effects of change of color according to the orientation in comparison to the source of light
- ✚ **CLEAR STRUCTURED:** its application on any smooth color changes the surface of it and protects it from the light
- ✚ **PHOTOLUMINESCENT:** varnish that acts in absence of light for safety systems, conforming to the relative normative European, class A and class B
- ✚ **ANTI-BACTERIAL:** varnish that prevents the proliferation of an ample ghost of microorganisms
- ✚ **TRANSPARENT PAINT FOR FOOD:** applied on any product makes consistent use food, approved by the transmigration test of heavy metals, by the Experimental Station for the canned food industry of University of Parma
- ✚ **MDF POWDER:** cooking for convection to 130°C or The.R./U.V.
- ✚ **HIGH FLEXIBILITY:** it allows the postforming of the parts after the application of the paint
- ✚ **HEAT RESISTANT:** resistant up to 500°C, available in black color, silver and transparent
- ✚ **WRINKLE:** range of products with new structural effect
- ✚ **HEAT DETECTOR:** varnish able to vary its color in base to the temperature, available to signal changes of temperature from -27°C to +80°C
- ✚ **THERMOPLASTIC:** vast range of thermoplastic products, from the rilsan to the plascoat PPA 571, to satisfy whatever demand of anticorrosive and use to feed
